Team 14 Homework 3 Report

Demo:
https://youtu.be/DeMlcW9a9pk

Positive:
Assignment 3 was a more challenging assignment than the first two. File I/O usually comes with its own set of issues. The team was able to successfully navigate those issues through cooperation and communication. We were able to resolve many of the communication issues from the last assignment and had a positive and encouraging atmosphere throughout the coding process.

Negative:
One thing that the team struggled with was reading in the data properly. While it was easy to see how the information was stored in the files, it was harder to properly convey that data into useable variables. This was an issue we overcame as a team by each contributing to the process.

Contribution:
Cristian Quiterio:
- Got the output file and array display working
- Performed input validation and ensured data stability

Jaytonn Hunter:
- Provided the initial html and php structure
- Read in the input for the files

Caleb Vandergriff:
- Randomized the information into customer data
- Created the table for the customer data
